Question Bank

Sl. NO.	Questions-Module-3
1.	What is an Array? Example it with suitable syntax and example program?
3.	What is one dimension array? Explain how it is declared and initialized with suitable examples.
4.	What is two-dimensional array? Explain how it is declared and initialized with suitable examples.
5	Write a C program to search a key element using binary search technique.
6	Write a C program to sort a given list of elements using bubble sort.
7	Write a C program to find the sum of 2 matrices.
8	Write a C program to find the product of 2 matrices.
9	Explain how functions are categorized based on return type and arguments.
10	Explain the terminologies with examples. i. Function call ii Function definition iii. Actual parameter iv. Formal parameter.
11	What is a Function? How they are declared and initialized?
12	What is argument passing or parameter passing in C? Explain pass by value and pass by reference with example program for each.
13	What is Recursion? Explain with a suitable example program?
14	Write a C program to find the factorial of a given number using recursive function.

Sl. NO.	Questions-Module-4
1.	What are Strings? Explain how strings are declared and initialized?
2.	Explain the various String handling or string manipulation functions in C?
3	Write a C program to reverse a string without using string handling functions.
4	Develop a C program to convert the characters of a string to upper case without using string manipulation function and display the result.
5	Explain about formatted and unformatted input output functions with example program for each.
6	Write a C program to concatenate two strings without using string handling function.
7	Explain array of structures with example program.
8	What is a Pointer? Explain how pointer variables are declared and initialized.
9	Explain how a pointer is used as an argument in a function?
10	Write a C program to find the bigger of 2 numbers using pointers.

Sl. NO.	Questions-Module-5
1	What is Structure? How it is different from Arrays? Explain and differentiate between the two.
2	What is Structure? Explain its syntax with suitable example program.
3	Give an example of a C structure and explain how members of the structure are accessed in a C program.

4	Explain a structure within a structure, giving an example program.
5	Explain how a structure is passed as an argument to a function with suitable program.
6	What are Files in C? Explain atleast 5 file handling functions in C.
7	With syntax and example, explain the file functions used to input to a file and read content from the file.
8	Explain the function of i. fopen( ) ii. fclose( ) iii. feof( ) iv. fprintf( ) v. fscanf( )
